APPENDIX 1: QUERY FOR IATROGENIC-INDUCED CONTRIBUTING FACTORS TO DISEASE

I am doing a study on Iatrogenic-induced contributing factors (CFs) to disease, the diseases that result, and the specific biological mechanisms that link each specific CF to specific diseases that they impact. I have generated a draft study, which is contained in the uploaded file. The draft document is incomplete, needs to identify more CFs and identify any missing categories, and needs a section on biological mechanisms common to categories of CFs and common to the diseases they induce.

Please generate a report consisting of four main sections (EXECUTIVE SUMMARY, BACKGROUND, RESULTS AND DISCUSSION, SUMMARY AND CONCLUSIONS.), and identify 1) the full spectrum of Iatrogenic-induced contributing factors (CFs) to diseases, 2) the specific diseases to which they contribute, and 3) the biological mechanisms that link these specific CFs to the specific diseases identified. Provide both categories of CFs and specific CFs within those categories. Include vaccines (e.g., MMR, mRNA-based, etc.). Add any sub-sections that I may have overlooked in the query above and that would improve this report. Do not cut corners; this is a very important document.
